CLRC’s Rutherford Appleton Laboratory was the venue for this year’s Annual Convention and AGM. In the shadow of RAL’s 12 metre S-Band satellite dish amateur astronomers from round Britain met together for a day of lectures, browsing, renewing old acquaintances and making new ones.

The day’s programme was kicked off with an introduction by President Pam Spence, swiftly followed by our first Speaker, Professor Richard Harrison of the Rutherford Appleton Laboratory. Professor Harrison’s subject was the Solar and Heliospheric Observatory (SOHO) satellite developed jointly by ESA and NASA. SOHO is locked in orbit at the Lagrangian point between the Sun and the Earth, and provides continual images of the Sun in various wavelengths. Rutherford Appleton Laboratory has been a key player in the construction and operation of instruments aboard this craft, and in particular the Coronal Diagnostic Spectrometer (CDS). Using the CDS scientists have been able to view granulation caused by convection flows, hot and cold plasma loops captured by magnetic fields, high velocity jets, and solar ‘tornadoes’. Professor Harrison displayed many breathtaking images of the Sun taken for the most part on the same day, and animated movies of solar mass ejections and sun grazing comets compiled from images using the LASCO instrument. Using LASCO images UK amateur Michael Oates now holds the record for comet discoveries.

Geologist Dr. Bob Owens from the National Museum of Wales talked about a group of small solar system bodies known as the Kuiper-Edgeworth belt. Residing beyond the orbit of Neptune, they are now known to be responsible for short period comets. The largest Kuiper belt object is Pluto but most are far smaller and orbit in a disk in the plane of the ecliptic.

This year’s Eric Zucker Award was presented to Bob Owens in honour of the time he has spent popularising astronomy. He was a co-founder of Cardiff Astronomical Society, a past President of the FAS and the originator of the FAS Astro Calendar. He produced the Astro Calendar for many years, proving to be a very popular publication which has earned money for both the FAS and individual societies.
Convention 2000—Continued

Nik Szymanek of Havering AS literally jetted in to talk about CCD Imaging. He had just that morning stepped off the plane from yet another trip to The Canary Islands and eight clear nights in succession. However, despite the jeers he soon had the audience on his side when he revealed some of the images he and Ian King had managed to capture, both from La Palma and this country. Explaining in simple terms the adding together of black and white images taken with red, green and blue filters to create full-colour images. A new technique also using a plain black and white image as well as the tri-colour images has revealed even more detail in their images. He was also proud to show us the showpiece in their collection of a fantastic image of M51 taken from one of the observatories at La Palma. Nik and Ian have had such experience at manipulating images that the professional observatories are starting to utilise their unique talents to further professional study. Both Nik and Ian are inspiration to amateurs everywhere.

In his lecture “Towards the Event Horizon” Professor Phil Charles of Southampton University explained about the formation of massive black holes at the centre of galaxies. Very recent research has shown that the rapid movement of stars within a few light years of the core of our own Milky Way Galaxy confirms that it too contains such an object.

Closing the day, The Ken Marcus Memorial Lecture was given by Professor Mike Edmunds of Cardiff University. In “Sir Isaac Remembers...” Professor Edmunds ‘performed’ as Sir Isaac Newton a lecture that Sir Isaac might actually have given to such a gathering. Stories and reminiscences about his life were taken from papers and letters by Sir Isaac and his contemporaries. Of particular note were some of his experiments which are certainly not recommended for repeating these days, such as manipulating your eyeball with a needle!

In addition to the lecture programme there was ample opportunity to view books at the Earth & Sky stall, Celestron equipment courtesy David Hinds, and space flight items at the Midlands Spaceflight Society stall. Back issues of Astronomy Now for sale helped people to complete their collections, and all FAS publications & Slides were available.

Annual General Meeting 2000
Reports

President — Pam Spence

I am pleased to report that the FAS continues to grow from strength to strength, not only in the numbers of members, but also in its rôle as a representative of astronomical societies. One of the most recent examples of this is being asked to join the Pro-Am Telescope Allocation Group for the 2 metre Liverpool Telescope Project. Once this gets off the ground, you will be kept informed through the FAS Newsletter.

Throughout the year I have filled in referee sections of various applications forms made by societies for various grants. I am pleased to say that some societies were successful, which is great as we play such an important rôle in helping to bring astronomy to the general public, into schools and to various other groups like Scouts and Guides. The government has invested strongly in their Public Understanding of Science and it is only just that we have a share of some of the funds. In general I believe our work as amateurs goes unrecognised.

As usual I have been aided through the year by members of the FAS Council. I know you all understand that they give up their time for free, and I hope you appreciate what a marvellous job they all do on your behalf. I would like to take this opportunity of asking you to thank them, with me, for all the hard and excellent work they have done.

Some members will be standing down this year. As usual we have vacancies on Council, some in key positions, and I would urge you all to think if you could spare some free time in helping the FAS. The more people on Council, the less arduous the work for Council members. At the moment some Council members are doing more than one job, which I feel is unfair and unnecessary. Looking at how many member societies we have, and how many individuals belong to those societies, surely there are some who could spare us a little time?

I am standing down as President this year, but hope to remain on Council in a slightly less demanding rôle. I believe the FAS fulfils an important function within the amateur astronomical community. Please support the FAS or you will lose it.

Vice President — Malcolm Jones

Malcolm offered thanks of behalf of Council for Pam’s hard work as President.

Treasurer — Dave Sutton

This is my fourth annual report as FAS/Treasurer. The 1999/2000 accounts were audited by Bob Turner (Member of Worthing AS) and his comments were favourable. I can report that we have had a good year, our income was about same as the previous year and our loss on the income/expenditure account of (54.34) compared to what a marvellous job they all do on your behalf. I would like to take this opportunity of asking you to thank them, with me, for all the hard and excellent work they have done.

Some members will be standing down this year. As usual we have vacancies on Council, some in key positions, and I would urge you all to think if you could spare some free time in helping the FAS. The more people on Council, the less arduous the work for Council members. At the moment some Council members are doing more than one job, which I feel is unfair and unnecessary. I am standing down as President this year, but hope to remain on Council in a slightly less demanding rôle. I believe the FAS fulfils an important function within the amateur astronomical community. Please support the FAS or you will lose it.

Vice President — Malcolm Jones

Malcolm offered thanks of behalf of Council for Pam’s hard work as President.

Treasurer — Dave Sutton

This is my fourth annual report as FAS/Treasurer. The 1999/2000 accounts were audited by Bob Turner (Member of Worthing AS) and his comments were favourable. I can report that we have had a good year, our income was about same as the previous year and our loss on the income/expenditure account of (54.34) compared to what
with the previous year 1998/1999 of nearly (480.00) was inline of what I expected. Expenditure was within the guide lines set out at the beginning of our financial year. On our reserve account, I did not have to draw on this and with a little interest added it remains in a healthy position. Membership, and Societies within the Public Liability Insurance Scheme have increased during my period as Treasurer. The PLI now has 129 AS's. I do not wish to raise Subscriptions for year 2000/2001. The PLI unfortunately is under review by our insurer's, for this year (2000/2001) the annual premium I request from each member society will remain at ten pounds per society per year. From year 2001/2002 I'm afraid this will rise slightly, details of the proposals are being agreed at this time, as soon as I have the final agreement I'll advise all members within the PLI. Subscriptions for 2000/2001, smaller AS's (30 members or less) remain at (7.50 per year) & Larger AS's (30+ members) at (15.00 per year), I will circulate financial details to all AS's Secretaries/Treasurers as in previous years within the new edition of the FAS/Newsletters. As this will be my last year as treasurer I wish to thank all AS's and members who have supported me during the four years. I'll be handing over to our new FAS/Treasurer, Rebecca Gardiner after the AGM.

Membership Secretary—Eric Hutton
Membership currently stands at 159 societies, with 129 being participants in the PLI scheme. There are 40 societies whose subscriptions are overdue. Eric was pleased to advise that here appear to be several new societies in Scotland. There are thought to be about 40 societies which are not members of the FAS.

Education Secretary—Peter Corbally
There had been some general queries to deal with, but most of his time has been spent reviewing the National Curriculum with respect to astronomy. There have been a number of changes made to the curriculum which has delayed publication of a booklet on the subject. The booklet, “Astronomy and the National Curriculum” is now available. Astronomy is an important feature of the revised curriculum, and anecdotal evidence suggest that about 80% of societies are involved with their local schools.

Publications Secretary—Malcolm Jones
Income from publications is a significant contribution to keeping the level of FAS subscriptions down, particularly sales of the Astro Calendar. Malcolm pointed out that societies could buy FAS publications and then sell them on for a profit. Over the previous three years, sales of Astro calendar had been 97/8 1400, 98/9 2500, and 99/00 2250 (these figures are sales by pub sec. and do not include sales from shows and conventions). In general the number of publications taken by societies is low. Malcolm asked members to check their society’s entry in the Handbook membership list. There was a query from the floor regarding electronic publication. Malcolm pointed out that the Newsletter is published on the Web site, but that the other publications are a major source of income for the Federation and electronic publication would not be appropriate.

Publicity Officer—John Parratt
John advised the meeting that he works on arranging the trade stands for events.

Handbook Editor—Dave Eagle
The new handbook is nearly complete, mostly waiting for the results of the elections at the AGM for the new Council. The new handbook should be published in a few weeks time.

Slide Librarian—Alan Drummond.
The current collection is a bit ad-hoc in nature. Work continues on the collation of material to produce themed sets of slides.

Web Site Co-ordinator—Nick Quinn.
The FAS is moving from its Demon site to a free ISP site. The Federation had also registered its domain name as fedastro.org.uk. Societies were asked to update any links on their own sites to point to the new URL.

Other officers either had no reports or were not able to attend. The President thanked Newsletter Editor Rob Barter for his hard work through the year and explained that increased personal commitments had meant that Rob had asked to stand down.

For details of the new elected council please see the back cover of this newsletter.

Newsletter Editor—Callum Potter
Just a few words to introduce myself, as new editor for the FAS Newsletter. I am an active member of the Cotswold Astronomical Society, and currently arrange the speakers for meetings, and edit the societies newsletter, Mercury. I also look after the CAS web site as well as the BAA Deep Sky Section web site. Observationally, I particularly enjoy hunting down deep sky splendours with my 25cm Dobsonian.

In taking on the editorship of the FAS Newsletter I hope to maintain the high production values we have enjoyed over many years. The newsletter is the primary means of communication between the Council and Members, and between Member Societies, so I will try to achieve a balance of society news, interesting articles and talking points. In particular it would be great to have a reports about events you have organised and other ideas you have about promoting astronomy within the UK.

Please send me your views on the content; what you like, what you don’t like. We will continue to publish 4 issues per year with eight pages per issue, so please send your submissions in good time. If you would like to send an article in electronic format, Microsoft Word, Rich Text or Plain Text format is preferred. Hard copy or hand written items are also welcome.

A final note of thanks to Rob Barter and Doc Sutton who have helped to ease this transition period.

Clear skies, Callum.
FAS President—Malcolm Jones

I am writing this with 2 hats on, that of the retiring Vice President and the new President.
First of all I would like to thank all the Council members for all the work they have put into the FAS over the last year and welcome the new comers. I did a quick check and there were on average 3-4 e-mails each day. It is not unusual to log-on after a weekend away and find 25 waiting. We may curse computers, but it would be much more difficult to run an organisation such as the FAS without one and hence making the Council meetings more of a fine tuning, than house of commons.
With my new hat on, I hope to continue the excellent work that Pam has done over the past few years and serve the astronomical societies who are after all, the FAS.

Scottish Astro-Fest 2000

Wigtown, Galloway, South West Scotland
Organised by Wigtownshire Astronomical Society
Friday, 24th and Saturday, 25th November, 2000.

A special gathering for all astronomers is taking place at Scotland's National Booktown, Wigtown in the South West of Scotland. DO NOT MISS attending what will be a most enjoyable, interesting, fun-filled and information-packed weekend.

Programme:
Friday, 24th, November at 8pm.
- A talk by the Astronomer Royal for Scotland, Professor John Brown.
  "BLACK HOLES & WHITE RABBITS".

Saturday, 25th November, 10.00am till 5.00pm.
- Throughout the day:
  - Workshops and Demonstrations.
  - Trade Stands.
  - Planetarium Shows.
  - Bring and Buy Sale. Bring those old telescopes and bits and pieces and raise funds for your society or even your good old self! (10% Commission to W.A.S.)
  - Talks on various topical subjects by Top Class Professional and Amateur Astronomers.
  - Displays of Telescopes.
  - Information and Astronomical Society Stands.
- Scottish Astronomers Group. Annual General Meeting. (2.00-2.30pm.)
- Astronomical Books (Bookshops in Wigtown).

Cosets are being kept as low as possible...no glossy leaflets, admission free except planetarium.

For further details or updates contact

HETE-2 Launched

Satellite HETE-2 was successfully launched on the 9th October 2000. The instruments on HETE-2 will be able to more accurately locate the sources of Gamma Ray Bursts (GRBs) and source rapid alerts for ground based observers. GRB’s were certainly the ‘flavour of the day’ at the Annual Meeting of The Astronomer with three talks on the subject, including a report of the first amateur observations of the optical transient associated with a GRB by Finnish amateur Arto Oksanen using a 40cm Meade and ST7 CCD camera. Little is known about GRB’s, they seem to be associated with distant galaxies but their nature is very unclear. Observations of the optical transients (photometry, astrometry and spectroscopy) will give valuable clues and amateurs can help with such observations. At their peak the transients could be apparent magnitude 8 or 9 so expensive equipment may not be needed, just a telescope and the naked eye. Anyone interested in participating in such a programme should get in touch with The Astronomer.

Cotswold AS Welcomes Don Lind

U.S. astronaut Don Lind visited the Cotswold AS on August 12th giving an enthralling talk full of tales of his life in the astronaut programme. Don Lind’s part in the programme was surely frustrating being slated to fly on Apollo moon shots and Skylab before his missions were cancelled. Delays to the shuttle postponed his first flight into space until April 1985 aboard STS51B/Spacelab 3, 19 years after joining the programme. Dr. Lind showed a video of his Spacelab 3 mission, giving a running commentary of the science experiments including auroral photography, fabricating crystals under zero-G and reactions of animals to weightlessness.

Dr. Lind is currently in the U.K. on a mission for the Church of the Latter Day Saints.
Due to the publication process, an advert for the Liverpool John Moores University Distance Learning course could not be rendered in this on-line version of the Newsletter.

Advertising Space
Small adverts for members and their societies are free. For adverts of a more commercial nature we can provide up to A5 size in area for a small fee.
The newsletter has a circulation over 4000 to a specialised readership.
Contact the Editor for details.

Membership Changes
Remember to send society contact changes to the Membership Secretary, Eric Hutton, 29, Paternoster Close, Waltham Abbey, Essex, EN9 3JU.
Tel: 01992610243

Please remember to send ALL articles to the Editor, Callum Potter. Regrettably Material can only be returned if supplied with a SAE.
